

ASUS VivoBook S300C Hard Drive Replacement

This Guide will accomplish how to remove the hard drive in the asus VivoBook S300C

Written By: Cameron

INTRODUCTION

This Guide will accomplish how to remove the hard drive in the asus VivoBook S300C

TOOLS:

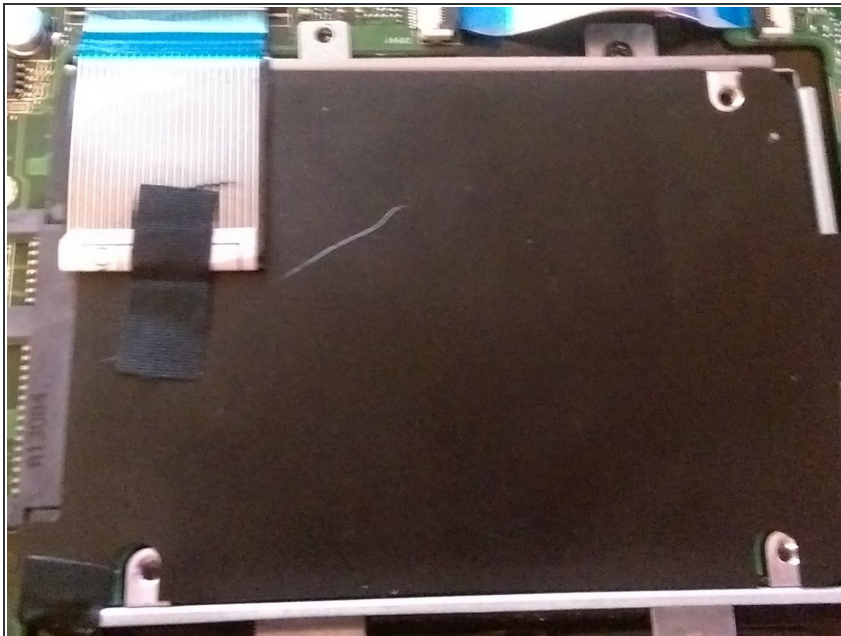

- [Phillips #0 Screwdriver](#) (1)
 - [Jimmy](#) (1)
-

Step 1 — Remove the bottom cover

- Remove the 10 screws on the back cover.
- ⓘ Some of the screws are missing from the system in this guide. It is recommended you take your own notes on where each screw goes to make sure the screws go back in the right place since I am not sure where every screw goes.

Step 2 — Remove the hard drive cable

- Remove the hard drive from the laptop. To do this, the cable is taped to the hard drive caddy. Remove the tape from the cable and disconnect the hard drive from the motherboard.
- ⓘ Just like the bottom cover, I am missing screws. The screws should all be the same length, but take notes if you want to play it safe.

Step 3 — Remove the hard drive from the caddy

- Remove the 4 screws holding the hard drive in the caddy. There are two screws on each side.

Step 4

- Reassemble the laptop by following the steps in reverse and then your hdd will be upgraded, you can also replace with an ssd to improve performance.
- This is my first guide so post a comment on how I did and what I did wrong so I can fix it for future posts!

To reassemble your device, follow these instructions in reverse order.
